EDUCATION

University of South Florida

Tampa, FL

Bachelor of Science in Electrical Engineering

Expected May 2029

USF GPA: 4.0/4.0

Relevant Coursework: Modeling Analysis (Differential Equations), Engineering Analysis (Linear Algebra), Programming with C, Electrical Systems I (In progress), Electronic Materials (In Progress)

EXPERIENCE

IEEE at USF EXO

Tampa, FL

R&D Lead

September 2026 – Present

- Integrating Derivative-Free Optimization (DFO) algorithm to develop a Human-in-the-Loop control system architecture for a lower-limb exoskeleton
- Applying CMA-ES optimization algorithms on an NVIDIA Jetson Nano to optimize dynamically control-laws parameter.

Electrathon

Tampa, FL

Smart System Team Member

September 2025 – May 2026

- Contributed on to planning for the integration of a speaker, monitor, Here 3+ GPS, proximity sensor, and lighting system.
- Assisted in research on 7s3p 120W battery pack.
- Developed the PCB layout and footprint routing in Altium Designer for a 25V–29V to 5V step-down buck converter based on a circuit design from TI WEBENCH
- Research on implementing LoRa using Heltec Wifi LoRa 32 V4 for transmitting data capable of 5km range in urban environments.

Foundation Lab of Engineering

Tampa, FL

Software Lead

September 2025 – December 2025

- Created an automated C script for an object-following robot resembling Krypto that is capable of following an object in left, right, and front directions, and produced audio feedback via DFPlayer Mini upon encountering objects.
- Developed a 3s1p 3000mAh 11.7V lithium-ion battery with discharge rate at maximum of 9A.
- Coordinated with team members in materials and cost analysis, constructing a memo, and proposal for final demonstration.

SKILLS

Languages: Arduino IDE, C, Java, Python, Jupyter Notebook, and MATLAB

Design Software: SolidWorks, Altium

Operating systems: Linux (Ubuntu)

PROJECTS

Custom Electric Bike

2025

- Designed a 13s1p 48V 433Wh battery pack utilizing Molicel P45B 3.7V 4500mAh cells and active-balance JKBMS 8S-17S 40A battery management system.
- Designed and 3D printed a custom waterproof housing and a controller mounting bracket in SOLIDWORK and utilizing PETG and flexible TPU gaskets to achieve IP-rated submersion seals (tested at 20 cm for 1 hour).
- Integrated a 1000W hub motor and motor controller into a 26-inch mountain bike chassis to achieve a continuous runtime of 2 hours at 20 mph under a 200 lbs load.
